1.0 PURPOSE

This *Performance Assessment Inventory Report – 2021 for the Replacement Panels Planned Change Request* (PCR PAIR-2021; hereafter referred to as "this report") was prepared by the Los Alamos National Laboratory - Carlsbad Operations (LANL-CO) as requested by Sandia National Laboratories – Carlsbad Programs Group (SNL-CPG) in a letter dated December 20, 2021, from Steve Wagner to Jerry Young of LANL-CO (SNL 2021; provided as Attachment 1, hereafter referred to as the "SNL WIPP Inventory Needs Letter"). This report documents the transuranic (TRU) waste inventory data needs that were requested in the SNL WIPP Inventory Needs Letter.

The inventory information provided in this report will be used by SNL-CPG to conduct a Waste Isolation Pilot Plant (WIPP) Performance Assessment (PA), which will model the performance of the WIPP repository in support of the Planned Change Request for replacement panels at the WIPP.

2.0 SCOPE

As requested, the information provided in this report is primarily based on the annual inventory as of December 31, 2020 that was collected from the TRU waste sites and provided a basis for the *Annual Transuranic Waste Inventory Report (ATWIR) – 2021* (ATWIR-2021; DOE 2021). The inventory presented within this report differs from that presented in the ATWIR-2021 in the following ways:

- Projections for waste generation up through calendar year (CY) 2079 are included (the ATWIR-2021 only included projections through CY 2033).
- The inventory is scaled to model a full repository (see section 4.2).

During the inventory collection, the waste streams are segregated into the following categories:

- *Emplaced* (already shipped from the TRU waste site to the WIPP or to Waste Control Specialists [WCS], a temporary storage location near Andrews, Texas),
- *WIPP-bound* (appear to meet the requirements for emplacement at the WIPP), and
- *Potential* (have uncertainties regarding eligibility for emplacement at the WIPP, as of the cutoff date).

For this report, only *Emplaced* and *WIPP-bound* waste streams were considered.

3.3 Definitions

emplaced	Permanently disposed underground at WIPP, stored above ground at WIPP, in temporary storage at WCS, or in transit to WCS/WIPP as of the inventory date (December 31, 2020) for this report.
projected	Not yet generated; estimated as future generation.
scaled (scaling)	A methodology by which actual inventory values are artificially increased in order to simulate a “full” repository.
stored	Already generated; in storage at a TRU waste site.

4.0 METHODOLOGY

4.1 Annual Inventory Collection and Publication

Inventory data and projected estimates are collected annually from the TRU waste sites and the WIPP Waste Data System (WDS) in order to maintain an updated inventory estimate of the United States Department of Energy (DOE) TRU waste complex. The data are compiled in the Comprehensive Inventory Database (CID; LANL 2021), which is software developed and qualified under the LANL-CO Quality Assurance (QA) program in accordance with the DOE Carlsbad Field Office (CBFO) *Quality Assurance Program Document* (QAPD; DOE 2017). Additionally, the CID automates the radionuclide decay process by using the Oak Ridge Isotope Generation and Depletion Code (ORIGEN-S), a module of *Standardized Computer Analysis for Licensing Evaluation* (SCALE) Version 6 (ORNL 2009), and a depletion and decay library that is qualified for use under the LANL-CO QA program in accordance with the QAPD. The CID is then used to generate the data reported in each ATWIR.

The data provided in this report are based upon the TRU waste inventory as of December 31, 2020 and labeled as CID data version D.20.RPPA (LANL 2021). Additionally, supplemental analyses were performed in order to completely satisfy the SNL WIPP Inventory Needs Letter requests (see section 4.3 below).

4.2 Scaling to a Full Repository

PA modeling in support of WIPP explicitly assumes that the WIPP is filled to its legislated capacity at time of closure, as required in Title 40 Code of Federal Regulations (CFR) Part 194.24 (EPA 1996). The legislated capacity for WIPP is 175,564 m^3 (6,200,000 ft^3), as set by the *WIPP Land Withdrawal Act* (U.S. Congress 1992 and 1996), with a limit of 7,079 m^3 (250,000 ft^3) for remote-handled (RH)-TRU waste as imposed by the *Consultation and Cooperation Agreement* (DOE and State of New Mexico 1988); therefore, the difference in the full legislated volume capacity and the RH-TRU imposed disposal limit sets the contact-handled (CH)-TRU disposal limit at 168,485 m^3 (5,950,000 ft^3). The volume of anticipated (stored plus projected) and emplaced TRU waste reported by the DOE TRU waste sites for the December 31, 2020 inventory collection is less than the legislated volume capacity for WIPP.

Since each of the requests included in the SNL WIPP Inventory Needs Letter (see Attachment 1) specify that the inventory be “scaled to a full repository,” a scaling methodology was implemented through the CID whereby a portion of the inventory was scaled such that the totals reflect

a “full” WIPP repository in terms of volume. The approved scaling methodology is to scale only the *projected* (not yet generated) portion of the inventory, since this represents future waste. By contrast, the *stored* (already generated) and *emplaced* (already shipped to WIPP or WCS) waste are fixed, known portions of the inventory that are left intact. This methodology is consistent with scaling previously performed for the initial WIPP Compliance Certification Application (DOE 1996) and Compliance Recertification Applications 2004 (DOE 2004), 2009 (DOE 2009), 2014 (DOE 2014), and 2019 (DOE 2019).

The CID is configured to produce scaled values by only scaling that portion of the waste which is projected. To do so, it has calculated scaling factors (for CH-TRU and RH-TRU waste separately) by which the respective projected volume totals are multiplied such that, when added with the stored and emplaced portions, are equal to the disposal limits (168,485 m^3 for CH-TRU, and 7,079 m^3 for RH-TRU) for the WIPP. These same scaling factors were then also used to scale the projected portion of radionuclide activity and non-radiological material mass estimates provided in this report.

The scaling factors calculated by the CID and used for this report are as follows (rounded to three significant figures):

CH-TRU	3.11
RH-TRU	5.99

4.3 Supplemental Analyses

Two additional analyses were performed to supplement the inventory information that the CID could not readily provide: *Chemical and Cement Components 2020 Inventory Estimates for Replacement Panels Planned Change Request* (LANL 2022a) and *Estimation of Cellulose, Plastic, and Rubber Emplacement and Operational Materials in the Waste Isolation Pilot Plant for Replacement Panels Planned Change Request* (LANL 2022b).

The *Chemical and Cement Components 2020 Inventory Estimates for Replacement Panels Planned Change Request* (LANL 2022a) analysis was performed to determine the total amount of oxyanions, complexing agents (organic ligands), and cement that would be present in a full WIPP repository. These inventory estimates are only available for that data collected from the TRU waste sites. Data on these components are not available from the WDS, which would represent the already-emplaced portion. Therefore, an analysis was warranted to estimate the total mass for these constituents, including those that have already been emplaced at the WIPP. The results from this analysis report are presented in Table 5-6, Table 5-8, and Table 5-9 below.

The *Estimation of Cellulose, Plastic, and Rubber Emplacement and Operational Materials in the Waste Isolation Pilot Plant for Replacement Panels Planned Change Request* (LANL 2022b) analysis was performed to estimate the amount of emplacement materials (used to facilitate the emplacement of waste, but not including the container packages themselves) and operational materials (used during operational activities and will remain in the repository at closure) in a full WIPP repository. Since the CID only compiles the materials data related to the waste and the packaging containers, this supplemental analysis was warranted. The results from this analysis report are presented in Table 5-7 below.

5.2 Waste, Packaging, Emplacement, and Operational Materials

SNL WIPP Inventory Needs Letter Request #'s 3 & 4

3. *Total inventory (scaled to a full repository) of all nonradiological waste material parameters reported as masses (in kg) for both CH- and RH-TRU waste. Nonradiological waste material parameters include: cellulosic, plastic and rubber (CPR) materials; iron-based metal/alloys; aluminum-based metal/alloys; other metals; solidified inorganic materials; solidified organic materials; vitrified materials; cements; soils; and other inorganic materials. These components may affect actinide solubility or gas generation rates.*

   Include only Portland cement (and concrete or other cements containing CaO or $Ca(OH)_2$) in the inventory of cement. Specify whether the partial mass density of cement is based on unreacted (dry) cement, reacted (hydrated) cement, or a combination. Do not include Portland cement under other waste material parameters.

4. *Total inventory (scaled to a full repository) of steel, lead, CPR and any other materials used to facilitate packaging of waste in the WIPP, reported as masses (in kg) for both CH- and RH-TRU waste. These materials may affect gas generation rates.*

Dear: Jerry Young

Subject: ***Sandia's WIPP Inventory Needs for the Replacement Panels PCR Performance Assessment***

This letter details Sandia's WIPP inventory data needs for the Replacement Panels PCR Performance Assessment. The data needs are largely the same as Zeitler (2018). The inventory needs to report waste volume using the new LWA volume methodology, waste that is emplaced, stored at WCS and is identified in the ATWIR-2021 as WIPP-bound. Per CBFO guidance, this inventory should include all WIPP-bound waste to the year 2079.

In order to conduct performance assessments of the WIPP that account for revisions to the inventory and account for both currently emplaced waste and to-be-emplaced waste (WIPP-bound), we will need an update to the following:

1. Waste stream volumes (in m^3) and inventory of radionuclides on a waste stream basis for both CH- and RH-TRU waste, supplied in Curies and decayed to the year 2079, for the following radionuclides (scaled to a full repository):
^{241}Am, ^{243}Am, ^{244}Cm, ^{137}Cs, ^{237}Np, ^{238}Pu, ^{239}Pu, ^{240}Pu, ^{241}Pu, ^{242}Pu, ^{244}Pu, ^{90}Sr, ^{229}Th, ^{230}Th, ^{232}Th, ^{233}U, ^{234}U, ^{235}U, ^{236}U, and ^{238}U.
2. Total CH- and RH-TRU inventories of all radionuclides (scaled to a full repository), supplied in Curies and decayed through the years: 2079, 2179, 2429, 3079, 7079, and 12079.

3. Total inventory (scaled to a full repository) of all nonradiological waste material parameters reported as masses (in kg) for both CH- and RH-TRU waste. Nonradiological waste material parameters include: cellulosic, plastic and rubber (CPR) materials; iron-based metal/alloys; aluminum-based metal/alloys; other metals; solidified inorganic materials; solidified organic materials; vitrified

materials; cements; soils; and other inorganic materials. These components may affect actinide solubility or gas generation rates.

Include only Portland cement (and concrete or other cements containing CaO or $Ca(OH)_2$) in the inventory of cement. Specify whether the partial mass density of cement is based on unreacted (dry) cement, reacted (hydrated) cement, or a combination. Do not include Portland cement under other waste material parameters.

4. Total inventory (scaled to a full repository) of steel, lead, CPR and any other materials used to facilitate packaging of waste in the WIPP, reported as masses (in kg) for both CH- and RH-TRU waste. These materials may affect gas generation rates

5. Total inventory (scaled to a full repository) of any non-containerized CPR materials and other biodegradable materials that will be disposed of in WIPP, reported as masses (in kg). This includes any CPR materials used in general WIPP operations or to directly facilitate emplacement of waste and MgO in the WIPP. These materials may affect gas generation rates.

6. Total inventory (scaled to a full repository) of organic ligands (acetic acid, sodium acetate, citric acid, sodium citrate, oxalic acid, sodium oxalate and sodium EDTA) and oxyanions (sulfates, nitrates and phosphates), reported as masses (in kg). These components may affect actinide solubility or gas generation rates.

In order for the update to be incorporated into performance assessment calculations, the data must be collected and analyzed in accordance with a Quality Assurance program approved by the Carlsbad Field Office.

Sincerely,

Steve Wagner
