1.0 PURPOSE

This *Full Repository Performance Assessment Inventory Report - 2024* (FRPAIR-2024; hereafter referred to as "this report") was prepared by the Los Alamos National Laboratory - Carlsbad Operations (LANL-CO). The inventory information provided in this report will be used by the Sandia National Laboratories – Carlsbad Programs Group (SNL-CPG) to conduct a full repository performance assessment (PA) scaled to the *WIPP Land Withdrawal Act* (LWA; U.S. Congress 1992 and 1996) statutory capacity in support of the Waste Isolation Pilot Plant (WIPP) fifth Compliance Recertification Application (CRA; CRA-2026). This report documents the transuranic (TRU) waste inventory data needs that were requested by SNL-CPG in a letter dated Septemer 23, 2024, from Steve Wagner to Anderson Ward of CBFO (SNL 2024). This letter (hereafter referred to as the "SNL WIPP Inventory Needs Letter") is provided as Attachment 1 to this report.

2.0 SCOPE

The information provided in this report is based on the annual inventory collected from the TRU waste sites and documented in the *Annual Transuranic Waste Inventory Report (ATWIR) - 2024* (ATWIR-2024; DOE 2024). The ATWIR-2024 contains an inventory of defense-related TRU waste information as of December 31, 2023, and segregates the waste streams into the following categories:

- *Emplaced* (already shipped from the TRU waste site to the WIPP or to Waste Control Specialists [WCS], a temporary storage location near Andrews, Texas),
- *WIPP-bound* (likely to be shipped to WIPP), and
- *Potential* (potential future WIPP waste).

For this report, only *Emplaced* and *WIPP-bound* waste streams were considered.

3.3 Definitions

emplaced	Waste that is held in aboveground storage or disposed of in the WIPP facility, in temporary storage at WCS, or in transit to WCS/WIPP as of the cutoff date.
potential	A designation in the ATWIR for a waste stream with meaningful uncertainties regarding its eligibility, due to technical or leagal considerations, for emplacement in the

	WIPP facility, as of the cutoff date. This designation is not intended to identify whether the waste stream will ultimately be disposed of at the WIPP. Regardless of its designation in the ATWIR, all TRU waste must meet all WIPP requirements before it can be disposed of in the WIPP facility. Potential waste streams are not used for PA; and therefore, not included in this report.
projected	The part of the inventory that has not been generated (does not physically exist), but is estimated to be generated at some time in the future by the TRU waste generator sites. TRU waste in projected waste streams includes waste from programs that have not come on-line as of the data cutoff date, as well as waste from ongoing projects and D&D waste that has not yet been packaged.
scaled (scaling)	A methodology by which actual inventory values are artificially increased in order to simulate a “full” repository at the LWA statutory capacity of 175,564 m^3 (6,200,000 ft^3).
stored	The part of the TRU waste inventory that currently exists (already generated, but not yet shipped to the WIPP facility) as of the data cutoff date.
WIPP-bound	A designation within the ATWIR for a waste stream that appears, as of the data cutoff date, to have no significant technical or legal constraints limiting the waste from being eligible for disposal in the WIPP facility after all waste characterization and certification criteria have been satisfied. WIPP-bound waste streams are used for PA; and therefore, included in this report.

4.0 METHODOLOGY

4.1 Annual Inventory Collection and Publication

Inventory data and projected estimates are collected annually from the TRU waste sites and the WIPP Waste Data System (WDS) in order to maintain an updated inventory estimate of the DOE TRU waste complex. The data are compiled in the Comprehensive Inventory Database (CID; LANL 2024a), which is software developed and qualified under the LANL-CO Quality Assurance (QA) program in accordance with the CBFO *Quality Assurance Program Document* (QAPD; DOE 2023). Additionally, the CID facilitates the decay and buildup correction of radionuclide activities by using Oak Ridge Isotope Generation and Depletion (ORIGEN-S) module of *Standardized Computer Analysis for Licensing Evaluation* (SCALE) Version 6 (ORNL 2009), acquired

software also qualified under the LANL-CO QA program in accordance with the QAPD. The CID is then used to generate the data reported in each ATWIR.

The data provided in this report are based upon the inventory collected as of December 31, 2023, which includes future generation estimates through calendar year (CY) 2083, and served as a basis for the ATWIR-2024 (DOE 2024). Additional decay calculations were performed upon this inventory to support the specific needs of this report, and the resulting data version was labeled D.23.00 (LANL 2024a).

Additionally, supplemental analyses were performed in order to completely satisfy the SNL WIPP Inventory Needs Letter requests (see section 4.3 below).

4.2 Scaling to a Full Repository

PA modeling in support of WIPP explicitly assumes that the WIPP is filled to its statutory capacity at time of closure, as required in Title 40 Code of Federal Regulations (CFR) Part 194.24 (EPA 1996). The statutory capacity for WIPP is 175,564 m^3 (6,200,000 ft^3), as set by the *WIPP Land Withdrawal Act* (U.S. Congress 1992 and 1996), with a limit of 7,079 m^3 (250,000 ft^3) for remote-handled (RH)-TRU waste as imposed by the *Consultation and Cooperation Agreement* (DOE and State of New Mexico 1988); therefore, the difference in the full statutory volume capacity and the RH-TRU imposed disposal limit sets the contact-handled (CH)-TRU disposal limit at 168,485 m^3 (5,950,000 ft^3). The volume of WIPP-bound anticipated (stored plus projected) and emplaced TRU waste reported by the DOE TRU waste sites for the ATWIR-2024 is less than the statutory volume capacity for WIPP.

Since each of the requests included in the SNL WIPP Inventory Needs Letter (see Attachment 1) specify that the inventory be “scaled to a full repository,” a scaling methodology was implemented through the CID whereby a portion of the inventory was scaled such that the totals reflect a “full” WIPP repository in terms of volume. The approved scaling methodology is to scale only the *projected* (not yet generated) portion of the inventory, since this represents future waste. By contrast, the *stored* (already generated) and *emplaced* (already shipped to WIPP or WCS) waste are fixed, known portions of the inventory that are left intact. This methodology is consistent with scaling previously performed for the initial WIPP Compliance Certification Application (DOE 1996) and CRA’s 2004 (DOE 2004), 2009 (DOE 2009), 2014 (DOE 2014), and 2019 (DOE 2019).

The CID is configured to produce scaled values by only scaling that portion of the waste which is projected. To do so, it has calculated scaling factors (for CH-TRU and RH-TRU waste separately) by which the respective projected volume totals are multiplied such that, when added with the stored and emplaced portions, are equal to the disposal limits (168,485 m^3 for CH-TRU, and 7,079 m^3 for RH-TRU) for the WIPP. These same scaling factors were

then also used to scale the projected portion of radionuclide activity and non-radiological material mass estimates provided in this report.

The scaling factors calculated by the CID and used for this report are as follows (rounded to three significant figures):

CH-TRU	1.36
RH-TRU	6.57

4.3 Supplemental Analyses

Two additional analyses were performed to supplement the inventory information that the CID could not readily provide. The two analyses are: *Chemical and Cement Components 2023 Inventory Estimates* (LANL 2024b), and *Estimation of Cellulose, Plastic, and Rubber Emplacement and Operational Materials in the Waste Isolation Pilot Plant* (LANL 2024c).

The *Chemical and Cement Components 2023 Inventory Estimates* (LANL 2024b) analysis was performed to determine the total amount of oxyanions, complexing agents (organic ligands), and cement that would be present in a full WIPP repository. These inventory estimates are only available for that data collected from the TRU waste sites. Data on these components are not available from the WDS, which would represent the already-emplaced portion. Therefore, an analysis was warranted to estimate the total mass for these constituents, including those that have already been emplaced at the WIPP. The results from this analysis report are presented in Table 5-6, Table 5-8, and Table 5-9 below.

The *Estimation of Cellulose, Plastic, and Rubber Emplacement and Operational Materials in the Waste Isolation Pilot Plant* (LANL 2024c) analysis was performed to estimate the amount of emplacement materials (used to facilitate the emplacement of waste, but not including the container packages themselves) and operational materials (used during operational activities and will remain in the repository at closure) in a full WIPP repository. Since the CID only compiles the materials data related to the waste and the packaging containers, this supplemental analysis was warranted. The results from this analysis report are presented in Table 5-7 below.

5.2 Waste, Packaging, Emplacement, and Operational Materials

SNL WIPP Inventory Needs Letter Request #'s 3 & 4

3. *Total inventory (scaled to a full repository) of all nonradiological waste material parameters reported as masses (in kg) for both CH- and RH-TRU waste. Nonradiological waste material parameters include: cellulosic, plastic and rubber (CPR) materials; iron-based metal/alloys; aluminum-based metal/alloys; other metals; solidified inorganic materials; solidified organic materials; vitrified materials; cements; soils; and other inorganic materials. These components may affect actinide solubility or gas generation rates.*

   Include only Portland cement (and concrete or other cements containing CaO or $Ca(OH)_2$) in the inventory of cement. Specify whether the partial mass density of cement is based on unreacted (dry) cement, reacted (hydrated) cement, or a combination. Do not include Portland cement under other waste material parameters.

4. *Total inventory (scaled to a full repository) of steel, lead, CPR and any other materials used to facilitate packaging of waste in the WIPP, reported as masses (in kg) for both CH- and RH-TRU waste. These materials may affect gas generation rates.*

Dear: Anderson

Subject: ***Sandia's WIPP Inventory Needs for Compliance Recertification Application 2026 Performance Assessment***

This letter details Sandia's WIPP inventory data needs for Performance Assessment. The data needs are largely the same as Wagner (2022). The inventory needs to report waste volumes using the LWA volumes methodology, waste that is emplaced, stored at WCS and is identified as WIPP-bound in the latest ATWIR. Please consider inventory data reported to the end of the calendar year 2083. In order to conduct performance assessments of the WIPP that account for revisions to the inventory and account for both currently emplaced waste and to-be-emplaced waste (WIPP-bound), we will need an update to the following:

1. Waste stream volumes (in m^3) and inventory of radionuclides on a waste stream basis for both CH- and RH-TRU waste, supplied in Curies and decayed to the year 2083, for the following radionuclides (scaled to a full repository):

   ^{241}Am, ^{243}Am, ^{244}Cm, ^{137}Cs, ^{237}Np, ^{238}Pu, ^{239}Pu, ^{240}Pu, ^{241}Pu, ^{242}Pu, ^{244}Pu, ^{90}Sr, ^{229}Th, ^{230}Th, ^{232}Th, ^{233}U, ^{234}U, ^{235}U, ^{236}U, and ^{238}U.

2. Total CH- and RH-TRU inventories of all radionuclides (scaled to a full repository), supplied in Curies and decayed through the years: 2083, 2183, 2433, 3083, 7083, and 12083.

WIPP:4.2.1:PA:QA-L:CRA 2026 PRESUBMITTAL

3. Total inventory (scaled to a full repository) of all nonradiological waste material parameters reported as masses (in kg) for both CH- and RH-TRU waste. Nonradiological waste material parameters include: cellulosic, plastic and rubber (CPR) materials; iron-based metal/alloys; aluminum-based metal/ alloys; other metals; solidified inorganic materials; solidified organic materials; vitrified materials; cements; soils; and other inorganic materials. These components may affect actinide solubility or gas generation rates.

   Include only Portland cement (and concrete or other cements containing CaO or $Ca(OH)_2$) in the inventory of cement. Specify whether the partial mass density of cement is based on unreacted (dry) cement, reacted (hydrated) cement, or a combination. Do not include Portland cement under other waste material parameters.

4. Total inventory (scaled to a full repository) of steel, lead, CPR and any other materials used to facilitate packaging of waste in the WIPP, reported as masses (in kg) for both CH- and RH-TRU waste. These materials may affect gas generation rates

5. Total inventory (scaled to a full repository) of any non-containerized CPR materials and other biodegradable materials that will be disposed of in WIPP, reported as masses (in kg). This includes any CPR materials used in general WIPP operations or to directly facilitate emplacement of waste and MgO in the WIPP. These materials may affect gas generation rates.

6. Total inventory (scaled to a full repository) of organic ligands (acetic acid, sodium acetate, citric acid, sodium citrate, oxalic acid, sodium oxalate and sodium EDTA) and oxyanions (sulfates, nitrates and phosphates), reported as masses (in kg). These components may affect actinide solubility or gas generation rates.

In order for the update to be incorporated into performance assessment calculations, the data must be collected and analyzed in accordance with a Quality Assurance program approved by the Carlsbad Field Office.

Sincerely,
