Mr. Kevin Pierard, Bureau Chief  
Hazardous Waste Bureau  
New Mexico Environment Department  
2905 Rodeo Park Drive East, Building 1  
Santa Fe, New Mexico 87505-6303

Subject: Transmittal of the Waste Isolation Pilot Plant 2020 Waste Minimization Report, Permit Number NM4890139088-TSDF

Dear Mr. Pierard:

The purpose of this letter is to provide you with the Waste Isolation Pilot Plant (WIPP) 2020 Waste Minimization Report.

We certify under penalty of law that this document and all attachments were prepared under our direction or supervision according to a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on our inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of our knowledge and belief, true, accurate, and complete. We are aware that there are significant penalties for submitting false information, including the possibility of fines and imprisonment for knowing violations.

Please contact Mr. Michael R. Brown of the Carlsbad Field Office at (575) 706-0072 if you have any questions regarding this certification.

Sincerely,

Reinhard Knerr  
Manager  
Carlsbad Field Office

Sean Dunagan  
President and Project Manager  
Nuclear Waste Partnership

WIPP HAZARDOUS WASTE FACILITY
PERMIT NUMBER NM4890139088-TSDF

WASTE ISOLATION PILOT PLANT 2020 WASTE
MINIMIZATION REPORT

SUBMITTED TO THE
NEW MEXICO ENVIRONMENT DEPARTMENT

NOVEMBER 2020

This report has been reviewed and approved by:

S. B. Jones, Manager
Site Environmental Compliance

Signature on File

Nov. 17, 2020
A waste minimization program is in place at the Waste Isolation Pilot Plant (WIPP) facility. The goal of this program is to reduce the volume and toxicity of hazardous and mixed wastes generated at the facility. The purpose of this report is to comply with the WIPP Hazardous Waste Facility Permit ( Permit) Part 2, Section 2.4 which states:

The Permittees shall implement and maintain a waste minimization program to reduce the volume and toxicity of hazardous and mixed wastes generated at the facility, as required by 20.4.1.500 NMAC (incorporating 40 CFR §264.73(b)(9)). The waste minimization program shall include proposed, practicable methods of treatment and storage currently available to the Permittees to minimize the present and future threat to human health and the environment. The waste minimization program shall include the following items:

1. Written policies or statements that outline goals, objectives, and methods for source reduction and recycling of hazardous and mixed waste at the facility;

2. Employee training or incentive programs designed to identify and implement source reduction and recycling opportunities for all hazardous and mixed wastes;

3. Source reduction or recycling measures implemented in the last five years or planned for the next federal fiscal year;

4. Estimated dollar amounts of capital expenditures and operating costs devoted to source reduction and recycling of hazardous and mixed waste;

5. Factors which have prevented implementation of source reduction or recycling;

6. Summary of additional waste minimization efforts that could be implemented at the facility that analyzes the potential for reducing the quantity and toxicity of each waste stream through production process changes, production reformulations, recycling, and all other appropriate means including an assessment of the technical feasibility, cost, and potential waste reduction for each option;

7. Flow charts and/or tables summarizing all hazardous and mixed waste streams produced by the facility by quantity, type, building or area, and program; and

8. Demonstration of the need to use those processes which produce a particular hazardous or mixed waste due to a lack of alternative processes, available technology, or available alternative processes that would produce less volume or less toxic waste.

The Permittees shall submit to the Secretary a report regarding progress made in the waste minimization program in the previous year. The report shall address items 1 – 8 above, shall show changes from the previous report, and shall be submitted annually by December 1 for the year ending the previous September 30th.
This report was prepared by the Permittees (the U.S. Department of Energy [DOE] - Carlsbad Field Office [CBFO] and the Nuclear Waste Partnership LLC [NWP]) in accordance with Permit Part 2, Section 2.4. This report describes how the Permittees addressed items 1-8 during Fiscal Year 2020 (FY20) (October 1, 2019, through September 30, 2020). This report describes any changes made since the previous report.

1. **Written policies or statements that outline goals, objectives, and methods for source reduction and recycling of hazardous and mixed waste at the facility.**

The WIPP Environmental Policy Statement, EA02EC14-1-0, establishes the Permittees’ strategic level environmental objectives. This policy formally communicates standards that ensure that facility personnel practice environmental protection as a core business principle. This commitment is documented by the implementation of the Environmental Management System (EMS), WP 02-EC.14, made evident through the International Organization for Standardization (ISO) 14001:2015 certification. Certification to the ISO 14001:2015 standard is verified through an independent third party auditing body. Continued certification to the ISO standard embeds continuous improvement into WIPP facility operations, specifically through the EMS program that requires improvements related to waste minimization and recycling.

The Permittees are committed to “...continually plan, perform, assess, and improve the environmental performance of the WIPP.” The WIPP Environmental Policy Statement (EA02EC14-1-0) was reviewed and updated as of July 1, 2020. The Environmental Management System (WP 02-EC.14) was reviewed and updated as of July 1, 2020. The facility’s ISO 14001:2015 certification remains in conformance as confirmed through the 2020 external audit conducted by 3rd party registrar Advanced Waste Management Systems.

The Permittees continue to communicate and educate site personnel regarding the data required for accurate reporting under the waste minimization programs. These actions are implemented through EMS core support programs including the WIPP Sustainable Procurement Plan (WP 02-EC.07) and the WIPP Pollution Prevention (P2) Program Plan (WP 02-EC.11). These core program plans implement standards that outline, define, and support the waste minimization strategy stated in Executive Order (EO) 13834, Efficient Federal Operations, and those required by the DOE Orders 436.1, Departmental Sustainability, and 436.1-1, Federal Sustainable Print Management. Core program components are captured and reported through the EMS.

Additional waste minimization methods specific to hazardous and mixed wastes are described in the WIPP Low-Level and Mixed Low-Level Waste Management Plan (WP 02-RC.05) and the WIPP Hazardous and Universal Waste Management Plan (WP 02-RC.01).

2. **Employee training or incentive programs designed to identify and implement source reduction and recycling opportunities for all hazardous and mixed wastes.**

Every WIPP employee receives General Employee Training. This includes content communicating general awareness of the Permittees’ EMS program, the waste management and recycling expectations, site pollution prevention strategy, facility waste minimization strategy, and sustainability expectations. Employees involved in universal or special site generated waste management and/or low-level waste handling activities receive additional training to ensure that they are qualified to perform their assigned tasks. The majority of these training courses contain elements in which waste minimization, source reduction, and recycling strategies are included. In addition, managers and supervisors receive training, as applicable to their positions, which includes a
review of the Pollution Prevention (P2) program.

Both the Hazardous Waste Overview (HWO) and Hazardous Waste Permit (HWP) Technical Training courses include practical information concerning the methods for reducing the amount of hazardous wastes generated at the site. This includes the procurement and use of less hazardous chemicals/materials, opportunities for recycling, reuse, and reducing the quantities purchased.

During FY20, numerous classes were held for the WIPP custodial staff covering the requirements for the proper handling and disposition of recyclable materials.

In FY20, the WIPP EMS Awareness Training e-learning module (ENV-100) was updated. The overarching objective is to provide general knowledge regarding the EMS and how it affects work at the WIPP facility. The training course provides a general working knowledge of ISO 14001:2015, Pollution Prevention, Waste Minimization, EO 13834, DOE Order 436.1, and the WIPP Hazardous Waste Facility Permit. The ENV-100 course is required for existing Management and Operating Contractor (MOC) personnel and new hires. The course is a biennial requirement for all WIPP personnel. The course is available online on the Technical Training web site.

In previous years, the P2 program implemented a single stream recycling method. This required more due diligence for WIPP staff in placing the proper material in the correct recycle container. In FY20 the campaign continued, reinforced by multiple site wide emails, flyers, kiosk postings, and cabinet displays encouraging participation and proper use of single stream recycling bins and associated recycling centers.

Earth Day 2020 was cancelled at the WIPP site due to COVID-19 concerns. However, multiple newsletters were distributed via email promoting Earth Day concepts, Environmental Sustainability, Energy Conservation, and Pollution Prevention. The Earth Day recognition incentive program will be restarted in FY21. The focus will remain on items to reinforce environmental and sustainable purchasing, waste reduction, recycling and reuse or repurposing (the 3R’s: Reduce, Reuse & Recycle).

3. **Source reduction or recycling measures implemented in the last five years or planned for the next federal fiscal year.**

The Permittees maintain an active recycling/reuse program and strive to continually improve performance in this area and are vigilant in exploring new recycling venues. Over the past five years, the Permittees recycling/reuse program at the WIPP facility has encompassed the following materials: *(Wood pallets were added during FY20)*

- Aluminum Cans
- Antifreeze
- Asphalt/Concrete
- Batteries (e.g., NiCad, Lithium, Alkaline, Lead Acid)
- Cardboard
- Chain-Link Fence
- Circuit Boards
- Electrical Ballasts
- Electronics
- Office Equipment
- Lamps/Lighting Fixtures
- Mixed Metals
- Paper
- # 1 Plastic
- Tires
- Ink/Toner cartridges
- Used Oil and Oil Filters
- Wood Pallets
During FY20, the WIPP facility diverted approximately 106 Metric Tons of waste materials from New Mexico landfills and the hazardous waste stream. The following graph compares FY19 and FY20.

The Permittees donated and/or diverted recovered products to include computer servers, computers, monitors, other office equipment, file cabinets, and office supplies having an asset value of $265,261.

4. *Estimated dollar amounts of capital expenditures and operating costs devoted to source reduction and recycling of hazardous and mixed waste.*

The Permittees’ FY20 budget for promoting and implementing P2 and waste minimization was $343,000. This funding allocation was used for staffing compensation, environmental awareness, and implementation programs of the WIPP EMS and Waste Minimization Program.

As in previous years, significant focus was placed on continuous improvement, reaching out to employees, clean recycling, and sustainable procurement methods.

5. *Factors which have prevented implementation of source reduction or recycling.*

The facility EMS program initiated the creation and implementation of an Environmental Management System Steering Committee (EMSSC). The committee is administered by senior level management reporting directly to executive management. The committee’s base responsibility is to ensure support and funding to the EMS and its supporting programs, including P2 and waste minimization as required by the ISO standard. This EMS program with EMSSC involvement is to elevate EMS, P2 and sustainability program improvements from the top down.

There continues to be no factors that prevent the implementation of the Permittees’ waste minimization program. It should be noted that major international recyclers like China that receive recyclable materials from many U.S. corporations have tightened the acceptance criteria for “clean product” for recycling. In ensuring that WIPP facility recyclable materials will continue to be accepted as a recyclable product, awareness campaigns have been initiated to educate staff of this requirement. The WIPP strives to maintain a viable recycling program.

During FY20, the EMS supported improvements specific to education and communication related to project environmental targets and P2 program strategy. Workers continue to respond to this
education and communication as evident by their participation in the waste minimization and recycling programs. The goal of reducing toxicity and the volume of hazardous waste generated at the WIPP facility remains in place. Waste streams that have the potential to generate hazardous waste are reviewed regularly to ensure minimization of hazardous constituents while incorporating waste reduction, recycling, and reuse whenever possible.

6. Summary of additional waste minimization efforts that could be implemented at the facility that analyzes the potential for reducing the quantity and toxicity of each waste stream through production process changes, production reformulations, recycling, and all other appropriate means including an assessment of the technical feasibility, cost, and potential waste reduction for each option.

During FY20, the Site Environmental Compliance (SEC) group integrated two processes that will assist in meeting our goal of reducing the amount and toxicity of hazardous materials used at the WIPP site, and therefore reducing the potential for hazardous waste generation.

a) SEC now reviews all Approval/Variance Request forms and their associated Safety Data Sheets related to subcontract work at the WIPP site. This allows the opportunity to screen chemicals associated with a project for replacement with suitable less-hazardous chemicals (i.e. paints, lubricants, etc.).

b) SEC now reviews all Environmental Compliance Review forms to ensure P2 and hazardous waste considerations are accounted for prior to any new project work, alterations, etc., being undertaken at the WIPP site.

7. Flow charts and/or tables summarizing all hazardous and mixed waste streams produced by the facility by quantity, type, building or area, and program.

The following table summarizes the type and amount of hazardous, mixed low-level and low-level waste generated by the Permittees between October 1, 2019 and September 30, 2020.

<table>
<thead>
<tr>
<th>Hazardous, Mixed Low-Level and Low-Level Radioactive Waste Summary Table</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Type of Waste Generated</strong></td>
</tr>
<tr>
<td>-----------------------------</td>
</tr>
<tr>
<td><strong>Hazardous Waste</strong></td>
</tr>
<tr>
<td>Flammable or Ignitable, Corrosive, Reactive or Toxic</td>
</tr>
<tr>
<td><strong>Mixed Low-Level Waste</strong></td>
</tr>
<tr>
<td>Lead Acid &amp; Lithium Ion Batteries</td>
</tr>
<tr>
<td><strong>Low-Level Waste</strong></td>
</tr>
<tr>
<td>HEPA Filters, PIDs, UG Vehicle Oil, Brine Water, misc.</td>
</tr>
<tr>
<td><strong>Total LL and MLL Waste</strong></td>
</tr>
</tbody>
</table>
8. *Demonstration of the need to use those processes which produce a particular hazardous or mixed waste due to a lack of alternative processes, available technology, or available alternative processes that would produce less volume or less toxic waste.*

Processes required for successful operations at the WIPP facility, contributing to the generation of site hazardous, mixed low-level and low-level radioactive waste as noted in the table above are managed and properly implemented through the waste minimization program. Ongoing efforts to review programs, work packages, and procurement acquisition to reduce the generation of hazardous waste continues. The program, as implemented, currently and effectively serves to protect human health and the environment. Program awareness enhancements to replace forklift batteries and clean operating air compressors are examples of improvements being evaluated for waste reduction as part of EMS oversight.

This report will be placed on the Information Repository in accordance with Permit Part 1, Section 1.14.2.
