**ATTACHMENT A: CALIBRATED TRANSMISSIVITY FIELDS**

2

This attachment contains plots of the 100 conditionally simulated (CS) calibrated transmissivity fields for the 1996 performance assessment of the Waste Isolation Pilot Plant (WIPP). The grey scale is presented in  $\log^{10} \text{ m}^2/\text{s}$  units. Two plots are presented for each field: a plot of the full-scale model and a plot that shows details of the WIPP site boundary and surrounding area. On the plots, the direction North is parallel to the east/west boundaries of the WIPP site and thus is pointed at the upper left corner of the figures. Note that the grid shown is the regional grid used by GRASP-INV; it is *not* the same grid as used in the transport calculations.
