## Form SP 9-6-3 <br> Inventory Data Change/Addition Control Form

## Page 1 of 2

This form is used to document resolution of data discrepancies and acquisition of additional data for the Transuranic Waste Inventory Update Report, 2003.

1. This form documents: $\square$ Additional Data Required $\boxtimes$ Change to Existing Data
2. Date: 11/12/04
3. Site:

LAN
4. Contact Name (include phone or email address as appropriate):

Stan Kosiewicz stan@lanl.gov
5. Identify Electronic File Names and Types (N/A if none received):
see attached email record
6. Comments:

Site identified volume discrepancy in the transmittal of the LA-TA-55-48 waste stream.

## 7. Discrepancy Resolution:

Per the attached email the volume and the radionuclide concentration for the site have been changed to the
values identified in the email attachment.

## 8. Changes/Additional Data Requested:

See above.

## Laurie:

Please sign this email and submit as proof that the volume reported in the correction was in fact 2.72 based on the correction Stan notes here for the volume of an SWB.

Rev,
Attached is a correction to my prior calculation for LA-TA-55-48. I incorrectly heard you say that an SWB had a volume of 0.89 m 3 . Using the correct volume of 1.89 m 3 lowers the $\mathrm{Ci} / \mathrm{m} 3$ by nearly $40 \%$.

Memo to file
November 10, 2004
From: Stan Kosiewicz
RE: Correction to TWIBR on LA-TA-55-48
An e-mail with an initial correction on LA-TA-55-48 was sent to Beverly Crawford (crawford@lanl.gov) on 11/5/04 that had an error because a volume of 0.89 m 3 was used for an SWB. The volume should have been 1.89 m 3 . Consequently, the $\mathrm{Ci} / \mathrm{m} 3$ for waste stream LA-TA-55-48 will be lower than what was reported to Ms. Crawford on 11/5/04. The correct values are provided below.

This memo to file was sent to Ms. Crawford on 11/10/04.
LA-TA-55-48
(11/10/2004)
Stored volume: $\quad 2.72 \mathrm{~m} 3$
(four 55-gallon drums @ 0.208 m 3 /drum, one SWB @. 1.89m3)
Projected volume:

| Isotope | Ci/m3 | Specific act used | Total g of isotope* |
| :--- | :--- | :--- | :--- |
| Am241 | $5.99 \mathrm{E}-3$ | $3.47 \mathrm{Ci} / \mathrm{g}$ | $4.7 \mathrm{E}-3$ |
| Pu238 | $1.50 \mathrm{E}+1$ | $17.3 \mathrm{Ci} / \mathrm{g}$ | 2.35 |
| Pu239 | $8.85 \mathrm{E}-3$ | $0.063 \mathrm{Ci} / \mathrm{g}$ | $3.8 \mathrm{E}-1$ |
| Pu240 | $4.44 \mathrm{E}-3$ | $0.2 \mathrm{Ci} / \mathrm{g}$ | $5.25 \mathrm{E}-2$ |
| Pu241 | $3.43 \mathrm{E}-1$ | $104 \mathrm{Ci} / \mathrm{g}$ | $8.98 \mathrm{E}-3$ |
| Pu242 | $3.62 \mathrm{E}-6$ | $0.0004 \mathrm{Ci} / \mathrm{g}$ | $2.48 \mathrm{E}-3$ |
| *Obtained from CONCERT AK database. |  |  |  |

Procedure:

1. Multiply total grams of isotope by its specific activity to obtain total Ci .
2. Divide Ci by waste stream volume $(2.72 \mathrm{~m} 3)$ to obtain $\mathrm{Ci} / \mathrm{m} 3$.

Subject: Re: Radionuclides for LA-TA-55-48
X-PMX-Version: 4.7.0.111621
Bev,
Attached is the information on TA-55-48 I was able to calculate this AM based on the database info Nathan provided me. I couldn't find out where the projected volume originates. So, I guess we stay with the current figure that you have of 13.7 m 3 .

Nathan said there wasn't any info on Uranium isotopes. So, I didn't do any calculations on them.

Stan
At 06:28 PM 11/4/2004-0700, Beverly Crawford wrote: Stan/Nathan:

We will need to have the information that you are working on for the waste stream in question by approximately 9:00 tomorrow in order to include it in the database and records for the next revision of the Inventory documentation.

Thanks for help us out on this.
