1.0 PURPOSE

This *Performance Assessment Inventory Report - 2018* (PAIR-2018; hereafter referred to as "this report") was prepared by the Los Alamos National Laboratory - Carlsbad Operations (LANL-CO) as requested by Russ Patterson, U.S. Department of Energy (DOE) Carlsbad Field Office (CBFO) Compliance Certification Manager (Patterson 2018). The inventory information provided in this report will be used by the Sandia National Laboratories – Carlsbad Programs Group (SNL-CPG) to conduct a performance assessment (PA) in support of the Waste Isolation Pilot Plant (WIPP) fourth Compliance Recertification Application (CRA; CRA-2018). This report documents the transuranic (TRU) waste inventory data needs that were requested by SNL-CPG in a letter dated October 24, 2018, from Todd Zeitler to Russ Patterson of CBFO (SNL 2018). This letter (hereafter referred to as the "SNL WIPP Inventory Needs Letter") is provided as Attachment 1 to this report.

2.0 SCOPE

The information provided in this report is based on the annual inventory collected from the TRU waste sites and documented in the *Annual Transuranic Waste Inventory Report (ATWIR) - 2018* (ATWIR-2018; DOE 2018). The ATWIR-2018 contains an inventory of defense-related TRU waste information as of December 31, 2017, and segregates the waste streams into the following categories:

- *Emplaced* (already shipped from the TRU waste site to the WIPP or to Waste Control Specialists [WCS], a temporary storage location near Andrews, Texas),
- *WIPP-bound* (likely to be shipped to WIPP), and
- *Potential* (potential future WIPP waste).

For this report, only *Emplaced* and *WIPP-bound* waste streams were considered.

3.2 Acronyms

ATWIR	Annual Transuranic Waste Inventory Report
CBFO	Carlsbad Field Office
CFR	Code of Federal Regulations
CH	contact-handled
CID	Comprehensive Inventory Database
CRA	Compliance Recertification Application
DOE	[United States] Department of Energy
EPA	[United States] Environmental Protection Agency

LANL-CO	Los Alamos National Laboratory – Carlsbad Operations
ORIGEN-S	Oak Ridge Isotope Generation and Depletion Code (a module of SCALE version 6)
PA	performance assessment
PAIR	Performance Assessment Inventory Report
QA	Quality Assurance
QAPD	[CBFO] Quality Assurance Program Document
RH	remote-handled
SCALE	Standardized Computer Analysis for Licensing Evaluation
SNL-CPG	Sandia National Laboratories – Carlsbad Programs Group
TRU	transuranic
WIPP	Waste Isolation Pilot Plant
WCS	Waste Control Specialists
WDS	[WIPP] Waste Data System

3.3 Definitions

emplaced	Permanently disposed underground at WIPP, stored above ground at WIPP, in temporary storage at WCS, or in transit to WCS/WIPP as of the inventory date (December 31, 2017) for this report.
potential	A designation in the ATWIR for a waste stream that is considered unsuited to be emplaced in the WIPP as of the cutoff date. This designation is not intended to identify whether the waste stream will ultimately be disposed of at the WIPP. Regardless of its designation in the ATWIR, all TRU waste must meet all WIPP requirements before it can be disposed of at the WIPP. Potential waste streams are not included in PAIR results.
projected	Not yet generated; estimated as future generation.

scaled (scaling)	A methodology by which actual inventory values are artificially increased in order to simulate a “full” repository.
stored	Already generated; not yet shipped to the WIPP.
WIPP-bound	A designation within the ATWIR for a waste stream that appears to meet the requirements for emplacement into the WIPP as of the cutoff date. WIPP-bound waste streams are included in PAIR results.

4.0 METHODOLOGY

4.1 Annual Inventory Collection and Publication

Inventory data and projected estimates are collected annually from the TRU waste sites and the WIPP Waste Data System (WDS) in order to maintain an updated inventory estimate of the DOE TRU waste complex. The data are compiled in the Comprehensive Inventory Database (CID; LANL 2018a), which is software developed and qualified under the LANL-CO Quality Assurance (QA) program in accordance with the CBFO *Quality Assurance Program Document* (QAPD; DOE 2017). Additionally, the CID facilitates the decay and buildup correction of radionuclide activities by using Oak Ridge Isotope Generation and Depletion (ORIGEN-S) module of *Standardized Computer Analysis for Licensing Evaluation* (SCALE) Version 6 (ORNL 2009), acquired software also qualified under the LANL-CO QA program in accordance with the QAPD. The CID is then used to generate the data reported in each ATWIR.

The data provided in this report are based upon the ATWIR-2018 (DOE 2018) and CID data version D.17.02.33 (LANL 2018a), which report the TRU waste inventory as of December 31, 2017 and estimate future generation through calendar year (CY) 2033. Additionally, supplemental analyses were performed in order to completely satisfy the SNL WIPP Inventory Needs Letter requests (see section 4.3 below).

4.2 Scaling to a Full Repository

PA modeling in support of WIPP explicitly assumes that the WIPP is filled to its legislated capacity at time of closure, as required in Title 40 Code of Federal Regulations (CFR) Part 194.24 (EPA 1996). The legislated capacity for WIPP is 175,564 m^3 (6,200,000 ft^3), as set by the *WIPP Land Withdrawal Act* (U.S. Congress 1992 and 1996), with a limit of 7,079 m^3 (250,000 ft^3) for remote-handled (RH)-TRU waste as imposed by the *Consultation and Cooperation Agreement* (DOE and State of New Mexico 1988); therefore, the difference in the full legislated volume capacity and the RH-TRU imposed disposal limit sets the contact-handled (CH)-TRU disposal limit at 168,485 m^3 (5,950,000 ft^3). The volume of anticipated (stored plus projected) and emplaced TRU waste reported by the DOE TRU waste sites for the ATWIR-2018 is less than the legislated volume capacity for WIPP.

Since each of the requests included in the SNL WIPP Inventory Needs Letter (see Attachment 1) specify that the inventory be "scaled to a full repository," a scaling methodology was implemented through the CID whereby a portion of the inventory was scaled such that the totals reflect a "full" WIPP repository in terms of volume. The approved scaling methodology is to scale only the *projected* (not yet generated) portion of the inventory, since this represents future waste. By contrast, the *stored* (already generated) and *emplaced* (already shipped to WIPP or WCS) waste are fixed, known portions of the inventory that are left intact. This methodology is consistent with scaling previously performed for the initial WIPP Compliance Certification Application (DOE 1996) and CRA's 2004 (DOE 2004), 2009 (DOE 2009), and 2014 (DOE 2014).

The CID is configured to produce scaled values by only scaling that portion of the waste which is projected. To do so, it has calculated scaling factors (for CH-TRU and RH-TRU waste separately) by which the respective projected volume totals are multiplied such that, when added with the stored and emplaced portions, are equal to the disposal limits (168,485 m^3 for CH-TRU, and 7,079 m^3 for RH-TRU) for the WIPP. These same scaling factors were then also used to scale the projected portion of radionuclide activity and non-radiological material mass estimates provided in this report.

The scaling factors calculated by the CID and used for this report are as follows (rounded to three significant figures):

CH-TRU	1.58
RH-TRU	12.7

4.3 Supplemental Analyses

Three additional analyses were performed to support the preparation of this report. One analysis documented the adjustment of the inventory estimates as collected (which forecasted through CY 2050) back to a CY 2033 forecast at the direction of the DOE (Shrader 2018). The remaining two analyses produce data to supplement the inventory information that the CID could not readily provide. The three analyses are: *Adjustment of 2016 and 2017 Projected Inventory to 2033 Closure Year* (LANL 2018b), *Chemical and Cement Components 2017 Inventory Estimates* (LANL 2018c), and *Estimation of Cellulose, Plastic, and Rubber Emplacement and Operational Materials in the Waste Isolation Pilot Plant* (LANL 2018d).

The *Adjustment of 2016 and 2017 Projected Inventory to 2033 Closure Yea*r (LANL 2018b) analysis was performed to document the adjustment of the inventory collected as of December 31, 2017 to reflect projections through CY 2033. The sites were originally instructed to provide their projections through CY 2050, however LANL-CO was given direction by DOE (Shrader 2018) to report only projections through CY 2033 in the PAIR-2018. This required that the inventory data be adjusted. Once completed, the resulting data version was labeled D.17.02.33, and is used to supply information for both the ATWIR-2018 and this report.

The *Chemical and Cement Components 2017 Inventory Estimates* (LANL 2018c) analysis was performed to determine the total amount of oxyanions, complexing agents (organic ligands), and cement that would be present in a full WIPP repository. These inventory estimates are only available for that data collected from the TRU waste sites. Data on these components are not available from the WDS, which would represent the already-emplaced portion. Therefore, an analysis was warranted to estimate the total mass for these constituents, including those that have already been emplaced at the WIPP. The results from this analysis report are presented in Table 5-6, Table 5-8, and Table 5-9 below.

The *Estimation of Cellulose, Plastic, and Rubber Emplacement and Operational Materials in the Waste Isolation Pilot Plant* (LANL 2018d) analysis was performed to estimate the amount of emplacement materials (used to facilitate the emplacement of waste, but not including the container packages themselves) and operational materials (used during operational activities and will remain in the repository at closure) in a full WIPP repository. Since the CID only compiles the materials data related to the waste and the packaging containers, this supplemental analysis was warranted. The results from this analysis report are presented in Table 5-7 below.

5.0 RESULTS

5.1 Radionuclides & Volumes

SNL WIPP Inventory Needs Letter Request #1

1. *Waste stream volumes (in m^3) and inventory of radionuclides on a waste stream basis for both CH- and RH-TRU waste, supplied in Curies and decayed to the year 2033, for the following radionuclides (scaled to a full repository): ^{241}Am, ^{243}Am, ^{244}Cm, ^{137}Cs, ^{237}Np, ^{238}Pu, ^{239}Pu, ^{240}Pu, ^{241}Pu, ^{242}Pu, ^{244}Pu, ^{90}Sr, ^{229}Th, ^{230}Th, ^{232}Th, ^{233}U, ^{234}U, ^{235}U, ^{236}U, and ^{238}U.*

Table 5-1. CH Volume (m^3) and Activity (Ci) By Waste Stream and Radionuclide Decayed thru 2033

Site	Waste Stream ID	Scaled Vol (m^3)	Am-241	Am-243	Cm-244	Cs-137	Np-237	Pu-238	Pu-239	Pu-240	Pu-241	Pu-242	Pu-244	Sr-90	Th-229	Th-230	Th-232	U-233	U-234	U-235	U-236	U-238

5.2 Waste, Packaging, Emplacement, and Operational Materials

SNL WIPP Inventory Needs Letter Request #'s 3 & 4

3. *Total inventory (scaled to a full repository) of all nonradiological waste material parameters reported in masses (in kg) for both CH- and RH-TRU waste. Nonradiological waste material parameters include: cellulosic, plastic and rubber (CPR) materials; iron-based metal/alloys; aluminum-based metal/alloys; other metals; solidified inorganic materials; solidified organic materials; vitrified materials; cements; soils; and other inorganic materials. These components may affect actinide solubility or gas generation rates.*

   Include only Portland cement (and concrete or other cements containing CaO or $Ca(OH)_2$) in the inventory of cement. Specify whether the partial mass density of cement is based on unreacted (dry) cement, reacted (hydrated) cement, or a combination. Do not include Portland cement under other waste material parameters.

4. *Total inventory (scaled to a full repository) of steel, lead, CPR and any other materials used to facilitate packaging of waste in the WIPP, reported as masses (in kg) for both CH- and RH-TRU waste. These materials may affect gas generation rates.*

Table 5-5. Waste and Packaging Materials

Waste Materials	CH Mass (kg)	RH Mass (kg)
Iron-based Metal/Alloys	1.41E+07	1.33E+06

Lead	--	1.38E+07
Grand Total	**9.15E+07**	**3.74E+07**

** The Cement totals here reflect only those reported by the TRU waste sites. The emplaced portion is accounted for in the Solidified Inorganic Material, Solidified Organic Material, and Other Inorganic Materials categories. For an estimate of total cements, see Table 5-6 below.*

Table 5-6. Cements

Type	CH Mass (kg)	RH Mass (kg)
Reacted Only	2.32E+06	3.35E+03
Unreacted Only	3.20E+03	--
Combination Reacted / Unreacted	6.55E+06	1.47E+02
Grand Total	**8.88E+06**	**3.50E+03**

NOTE: These estimates taken from LANL 2018c. For more information, see section 4.3. These values account for the emplaced amounts and the estimated amounts reported by the sites.

SNL WIPP Inventory Needs Letter Request #5

5. *Total inventory (scaled to a full repository) of any non-containerized CPR materials and other biodegradable materials that will be disposed of in WIPP, reported as masses (in kg). This includes any CPR materials used in general WIPP operations or to directly facilitate*

emplacement of waste and MgO in the WIPP. These materials may affect gas generation rates.

Table 5-7. Emplacement and Operational Materials

Material	Emplacement Material Mass (kg)	Operational Material Mass (kg)	Total Mass (kg)
Cellulose	2.24E+05	4.50E+01	2.24E+05
Plastic	1.54E+06	4.89E+03	1.55E+06
Rubber	--	4.79E+03	4.79E+03
Grand Total	**1.77E+06**	**9.72E+03**	**1.78E+06**

NOTE: These estimates taken from LANL 2018d. For more information, see section 4.3.

5.3 Other Chemical Constituents

SNL WIPP Inventory Needs Letter Request #6

6. *Total inventory (scaled to a full repository) of organic ligands (acetic acid, sodium acetate, citric acid, sodium citrate, oxalic acid, sodium oxalate and sodium EDTA) and oxyanions (sulfates, nitrates and phosphates), reported as masses (in kg). These components may affect actinide solubility or gas generation rates.*

Table 5-8. Oxyanions

Oxyanion	Total Mass (kg)
Nitrate	1.69E+06
Phosphate	2.76E+05
Sulfate	4.54E+05
Grand Total	**2.42E+06**

NOTE: These estimates taken from LANL 2018c. For more information, see section 4.3.

Table 5-9. Organic Ligands

Organic Ligand	Total Mass (kg)
Acetate	1.37E+04
Acetic Acid	1.59E+04
Citrate	2.63E+03
Citric Acid	5.08E+03
EDTA	4.03E+02
Oxalate	7.00E+02
Oxalic Acid	1.70E+04
Grand Total	**5.54E+04**

NOTE: These estimates taken from LANL 2018c. For more information, see section 4.3.

6.0 COMPARISON WITH THE PAIR-2012

This section presents the delta between values presented in section 5.0 of this report and their counterparts from the *Performance Assessment Inventory Report – 2012* (PAIR-2012; LANL 2012) which supplied inventory parameters to support the third CRA (CRA-2014). These deltas are provided simply to demonstrate the differences between the two reports. Although the same scaling methodology applied for this report was also used for the PAIR-2012, the two reports are based on different underlying inventories (12/31/2011 for PAIR-2012, and 12/31/2017 for PAIR-2018), and thus use distinct scaling factors to scale to a full repository.

Subject: Sandia's WIPP Inventory Needs for Performance Assessment

This letter details Sandia's WIPP inventory data needs for Performance Assessment. The data needs are largely the same as Zeitler (2016). In accordance with the direction provided by Shrader (2018), please only consider inventory data reported to the end of the calendar year 2033. In addition, we request a comparison of the currently requested inventory with that from the PAIR used in the most recent compliance calculations.

In order to conduct performance assessments of the WIPP that account for revisions to the inventory and account for both currently emplaced waste and to-be-emplaced waste, we will need an update to the following:

1. Waste stream volumes (in m^3) and inventory of radionuclides on a waste stream basis for both CH- and RH-TRU waste, supplied in Curies and decayed to the year 2033, for the following radionuclides (scaled to a full repository):

   ^{241}Am, ^{243}Am, ^{244}Cm, ^{137}Cs, ^{237}Np, ^{238}Pu, ^{239}Pu, ^{240}Pu, ^{241}Pu, ^{242}Pu, ^{244}Pu, ^{90}Sr, ^{229}Th, ^{230}Th, ^{232}Th, ^{233}U, ^{234}U, ^{235}U, ^{236}U, and ^{238}U.

2. Total CH- and RH-TRU inventories of all radionuclides (scaled to a full repository), supplied in Curies and decayed through the years: 2033, 2133, 2383, 3033, 7033, and 12033.

3. Total inventory (scaled to a full repository) of all nonradiological waste material parameters reported as masses (in kg) for both CH- and RH-TRU waste. Nonradiological waste material parameters include: cellulosic, plastic and rubber (CPR) materials; iron-based metal/alloys; aluminum-based metal/alloys; other metals; solidified inorganic materials; solidified organic materials; vitrified materials; cements; soils; and other inorganic materials. These components may affect actinide solubility or gas generation rates.

Include only Portland cement (and concrete or other cements containing CaO or $Ca(OH)_2$) in the inventory of cement. Specify whether the partial mass density of cement is based on unreacted (dry) cement, reacted (hydrated) cement, or a combination. Do not include Portland cement under other waste material parameters.

4. Total inventory (scaled to a full repository) of steel, lead, CPR and any other materials used to facilitate packaging of waste in the WIPP, reported as masses (in kg) for both CH- and RH-TRU waste. These materials may affect gas generation rates.

5. Total inventory (scaled to a full repository) of any non-containerized CPR materials and other biodegradable materials that will be disposed of in WIPP, reported as masses (in kg). This includes any CPR materials used in general WIPP operations or to directly facilitate emplacement of waste and MgO in the WIPP. These materials may affect gas generation rates.

6. Total inventory (scaled to a full repository) of organic ligands (acetic acid, sodium acetate, citric acid, sodium citrate, oxalic acid, sodium oxalate and sodium EDTA) and oxyanions (sulfates, nitrates and phosphates), reported as masses (in kg). These components may affect actinide solubility or gas generation rates.

In order for the update to be incorporated into performance assessment calculations, the data must be collected and analyzed in accordance with a Quality Assurance program approved by the Carlsbad Field Office.

Sincerely,

Todd R. Zeitler
