Necessary Information for the WIPP Ten Year Renewal Application, Part A

§270.13 Contents of part A of the permit application

Part A of the RCRA application shall include the following information:

(a) The activities conducted by the applicant which require it to obtain a permit under RCRA.

No changes are being proposed to the activities conducted at the Waste Isolation Pilot Plant (WIPP) that entails receiving, unloading, and transferring radioactive-mixed waste from the surface of the site to the underground hazardous waste management units. Waste will be emplaced in an underground geologic repository horizon located in a deep-bedded salt formation approximately 2,150 feet beneath the surface.

(b) Name, mailing address, and location, including latitude and longitude of the facility for which the application is submitted.

Waste Isolation Pilot Plant
P.O. Box 3090
Carlsbad, New Mexico, 88221
30 miles east of Carlsbad, New Mexico, on the Jal Highway in Eddy County

Geographic location:

32° 22’ 30” N
103° 47’ 30” W

(c) Up to four SIC codes which best reflect the principal products or services provided by the facility.

North American Industry Classification System (NAICS) Code for the WIPP Site: 562211

(d) The operator's name, address, telephone number, ownership status, and status as Federal, State, private, public, or other entity.

Owner and Operator:

U.S. Department of Energy
P.O. Box 3090
Carlsbad, New Mexico, 88221
Phone Number: 575-234-7300
The WIPP is a Federal facility

Co-operator:

Washington TRU Solutions LLC
P.O. Box 2078
Carlsbad, New Mexico, 88221

(e) The name, address, and phone number of the owner of the facility.

U.S. Department of Energy
P.O. Box 3090
Carlsbad, New Mexico, 88221
Phone Number: 575-234-7300

(f) Whether the facility is located on Indian lands.

The WIPP facility is not located on Indian lands.

(g) An indication of whether the facility is new or existing and whether it is a first or revised application.

The Waste Isolation Pilot Plant is an existing facility renewing its hazardous waste facility permit # NM4890139088-TSDF.

(h) For existing facilities, (1) a scale drawing of the facility showing the location of all past, present, and future treatment, storage, and disposal areas; and (2) photographs of the facility clearly delineating all existing structures; existing treatment, storage, and disposal areas; and sites of future treatment, storage, and disposal areas.

Please see Part A Application Figures:

- Figure 2-1, General Location of the WIPP Facility
- Figure 2-2, Planimeteric Map-WIPP Facility Boundaries
- Figure 2-2a, Legend to Figure O2-2
- Figure 3-1, Spatial View of the WIPP Facility
- Figure 3-2, Repository Horizon

- Figure 4, Parking Area – Container Storage and Surge Areas
• Renewal Application Figure M3, Drawing 51-W-214-W Underground Facilities
  Typical Disposal Panel
• Drawings of underground disposal areas are included in the Part A Application.

Additionally, photographs 4-1 through 4-12 are included in the Part A application.

(i) A description of the processes to be used for treating, storing, and disposing of hazardous waste, and the design capacity of these items.

The Permittees propose no change in the manner in which they store or dispose of TRU mixed waste, except for requesting the authorization for the disposal of TRU-mixed waste in Panels 8. The Permittees do not treat TRU mixed waste.

(j) A specification of the hazardous wastes listed or designated under 40 CFR part 261 to be treated, stored, or disposed of at the facility, an estimate of the quantity of such wastes to be treated, stored, or disposed annually, and a general description of the processes to be used for such wastes.

This information is found in the completed EPA Form OMB # 2050-0034 for hazardous waste numbers, estimates of annual quantity disposed per hazardous waste number, and process codes. Other information required by the form is included.

(k) A listing of all permits or construction approvals received or applied for under any of the following programs:

   (1) Hazardous Waste Management program under RCRA.

   (2) UIC program under the SWDA.

   (3) NPDES program under the CWA.

   (4) Prevention of Significant Deterioration (PSD) program under the Clean Air Act.

   (5) Nonattainment program under the Clean Air Act.

   (6) National Emission Standards for Hazardous Pollutants (NESHAPS) preconstruction approval under the Clean Air Act.

   (7) Ocean dumping permits under the Marine Protection Research and Sanctuaries Act.

   (8) Dredge or fill permits under section 404 of the CWA.

   (9) Other relevant environmental permits, including State permits.
Please see Part A Application Appendix A1, Table: “Active Environmental Permits” for an updated list of all applicable environmental permits, including the number and status of individual permits.

(l) A topographic map (or other map if a topographic map is unavailable) extending one mile beyond the property boundaries of the source, depicting the facility and each of its intake and discharge structures; each of its hazardous waste treatment, storage, or disposal facilities; each well where fluids from the facility are injected underground; and those wells, springs, other surface water bodies, and drinking water wells listed in public records or otherwise known to the applicant within ¼ mile of the facility property boundary.

A topographic map has been provided (see Figure A2-3) that depicts the facility extending one mile beyond the property boundaries of the source, depicting the facility and each of its intake and discharge structures; each of its hazardous waste treatment, storage, or disposal facilities; each well where fluids from the facility are injected underground; and those wells, springs, other surface water bodies, and drinking water wells listed in public records or otherwise known to the applicant within ¼ mile of the facility property boundary.

(m) A brief description of the nature of the business.

The Waste Isolation Pilot Plant (WIPP) geologic repository is defined as a "miscellaneous unit" under 40 CFR §260.10. "Miscellaneous unit" means a hazardous waste management unit where hazardous waste is treated, stored, or disposed of and that is not a container, tank, surface impoundment, waste pile, land treatment unit, landfill, incinerator, containment building, boiler, industrial furnace, or underground injection well with appropriate technical standards under 40 CFR Part 146, corrective action management unit, or unit eligible for research, development, and demonstration permit under 40 CFR §270.65. The WIPP is a geologic repository designed for the disposal of defense-generated transuranic (TRU) mixed waste. Some of the TRU wastes disposed of at the WIPP contain hazardous wastes as co-contaminants. More than half the waste to be disposed of at the WIPP also meets the definition of debris waste. The debris categories include manufactured goods, biological materials, and naturally occurring geological materials. Approximately 120,000 cubic meters (m³) of the 175,600 m³ of WIPP wastes is categorized as debris waste. The geologic repository has been divided into ten discrete hazardous waste disposal units (HWDU) which are being permitted under 40 CFR Part 264, Subpart X.

During the Disposal Phase of the facility, which is expected to last 25 years, the total amount of waste received from off-site generators and any derived waste will be limited to 175,600 m³ of TRU waste of which up to 7,080 m³ may be remote-handled (RH) TRU mixed waste. For purposes of this application, all TRU waste is managed as though it were mixed.

The process design capacity for the miscellaneous unit (composed of ten underground HWDUs in the geologic repository) shown in Section XII B, is for the maximum amount of waste that may be received from off-site generators plus the maximum expected amount of derived wastes
that may be generated at the WIPP facility. In addition, two HWMUs have been designated as container storage units (S01) in Section XII. One is inside the Waste Handling Building (WHB) and consists of the contact-handled (CH) bay, conveyance loading room, waste hoist entry room, RH bay, cask unloading room, hot cell, transfer cell, and facility cask loading room. This HWMU will be used for waste receipt, handling, and storage (including storage of derived waste) prior to emplacement in the underground geologic repository. No treatment or disposal will occur in this S01 HWMU. The capacity of this S01 unit for storage is 194.1 m³, based on 36 ten-drum overpacks on 18 facility pallets, four CH Packages at the TRUDOCKs, one standard waste box of derived waste, two loaded casks and one 55-gallon drum of derived waste in the RH Bay, one loaded cask in the Cask Unloading Room, thirteen 55-gallon drums in the Hot Cell, one canister in the Transfer Cell and one canister in the Facility Cask Unloading Room. The second S01 HWMU is the parking area outside the WHB where the Contact- and Remote-Handled Package trailers and the road cask trailers will be parked awaiting waste handling operations. The capacity of this unit is 50 Contact-Handled Packages and twelve Remote-Handled Packages with a combined volume of 242 m³.

During the ten year period of the initial permit, up to 129,750 m³ of CH TRU mixed-waste could be disposed in Panels 1-7. Panel 8 could receive an additional 18,750 m³ of CH TRU mixed waste for a total of 148,500 m³ of CH TRU mixed waste in panels 1 through 8. Up to 1,985 m³ of RH TRU mixed waste could be emplaced in Panels 4 to 7. The design capacity for RH TRU mixed-waste in Panel 8 is 650 m³ for a total of 2,635 m³ of RH TRU mixed waste in panels 4 through 8.

(n) For hazardous debris, a description of the debris category(ies) and contaminant category(ies) to be treated, stored, or disposed of at the facility.

Debris Wastes at WIPP
The debris waste category includes waste that is at least 50 percent by volume materials that meet the NMAC criteria for classification as debris (20.4.1.800 NMAC (incorporating 40 CFR §268.2)). Debris means solid material exceeding a 2.36 inch (60 millimeter) particle size that is intended for disposal and that is: 1) a manufactured object, 2) plant or animal matter, or 3) natural geologic material. The debris category includes metal debris containing lead, inorganic nonmetal debris, asbestos debris, combustible debris, graphite debris, heterogeneous debris, and composite filters, as well as other minor waste streams. Particles smaller than 2.36 inches in size may be considered debris if the debris is a manufactured object and if it is not a particle of S3000-homogeneous solids or S4000-soils/gravel material.
